PROFESSIONAL SUMMARY

Full-stack Computer Science student with production experience across the application stack — from **React Native/Redux** mobile interfaces to **Node.js/Express** REST APIs and **MongoDB** data layers. Shipped end-to-end features (event creation, signup flow, location-based UI) across **6 merged pull requests** as a developer intern, with deployment experience (**Docker**, **Render**, **EAS**) and backend depth (**FastAPI**, **PostgreSQL**, **Redis**) from independent projects.

EDUCATION

Canara Engineering College, Mangalore

CGPA: 8.26

KSEAB (SSLC/PUC)

B.E in Computer Science & Engineering

Expected Graduation: 2026

SSLC: 88.96% — PUC: 92.96%

EXPERIENCE

Orbit — Intern, Technical Team Member

Feb 2026 – Present

- Built end-to-end features for a location-based social discovery platform, working across a shared monorepo with **React Native/Expo + Redux** on the frontend and **Node.js/Express + MongoDB** on the backend.
- Redesigned the **landing page and signup flow UI**, pairing new React Native components with backend validation and auth logic to improve the onboarding experience.
- Engineered real-time chat infrastructure using **WebSockets**, connecting a React Native chat interface to backend event handling and geolocation-based event discovery services.
- Deployed and maintained the app across the stack: backend in production on **Render** (**Docker**, **Sentry** monitoring) and mobile builds shipped via **Expo Application Services (EAS)**.

ACHIEVEMENTS & LEADERSHIP

Core Unleashed Hackathon — Team Lead, “Digital Sentinels”

Apr 2025

- Ranked among the **Top 10 teams** out of **72 teams** and pitched our solution to the final judging panel after advancing through multiple evaluation rounds.
- Led a team to build PII Shield, a privacy-first PII redaction tool, in a **36-hour hackathon**, building both the upload/review UI and a **stateless backend** with a deterministic finding-ID system, running **OCR (Tesseract)** entirely locally to guarantee zero data retention.
- Implemented a **3-tier bounding-box fallback** (exact character → line-level → sidebar-only) to keep redaction accurate despite imperfect OCR spatial mapping.

Feature Development & Deployment

Ongoing

- Merged 5+ pull requests** into Orbit’s production codebase, spanning frontend UI, backend API changes, and production rate-limiting fixes.
- Implemented **event creation with feed-level visibility**, building the backend data model and REST endpoint alongside the React Native feed UI that surfaces public events across all users’ feeds.
- Built a **location-picker** combining a React Native map UI with backend reverse-geocoding logic to convert a dropped pin into an address.

PROJECTS

HVSapp — Healthcare Handoff Validation Platform

FastAPI, PostgreSQL, Celery, Redis

- Built the backend for a clinical handoff and medication-tracking system using **FastAPI**, decoupling an ASR transcription pipeline into async **Celery** task queues backed by **Redis** to avoid blocking real-time request handling.
- Implemented **PHI field encryption** and medication safety tracking via **Alembic** migrations on **PostgreSQL**, structuring the schema around clear domain boundaries (auth, medication, patients, transcription).

GraphSentinel — Graph Neural Network Cyber Defense System

Python, PyTorch Geometric, GraphSAGE

- Designed and trained a GraphSAGE-based intrusion detection model on CICIDS-2017, engineering a **7-feature behavioral signal set** from raw traffic data and resolving severe class imbalance (128K vs. 1,956 samples) with hybrid under-sampling and SMOTE.
- Achieved **99.57% accuracy** and **0.9975 AUC-ROC**, with inference optimized to **~120ms per graph** to fit within a 5-second real-time detection budget.

TECHNICAL SKILLS

- Frontend & Mobile:** React Native, Expo, Redux, React.js, Tailwind CSS
- Backend & APIs:** Node.js, Express, FastAPI, Flask, RESTful API design, WebSockets, Celery (async task queues)
- Databases & Caching:** MongoDB, PostgreSQL, Redis, Alembic migrations
- Cloud & DevOps:** AWS (EC2, S3, VPC), Docker, Render, Git/GitHub, Sentry, CI/CD basics, Linux Administration
- Languages:** Java, Python, JavaScript, SQL
- ML & Data:** PyTorch, PyTorch Geometric (GraphSAGE), Scikit-learn, OpenCV, MediaPipe
